KLERESCA
SKIN REJUVENATION

SKIN REJUVENATION REIMAGINED

* With LED light as a control, the treatment delivers approximately a 400% increase in collagen production. These results were documented in vitro and support findings from in vivo studies based on biopsies. 

* INSPIRED BY PHOTOSYNTHESIS
* WORKS AT CELLULAR LEVEL
* UP TO 400% COLLAGEN INCREASE
SKIN REJUVENATION REIMAGINED

A new technology that boosts your skin’s natural repair mechanisms

- Non-invasive biophotonic treatment\(^1,^{10}\)
- Designed to rejuvenate your skin\(^1,^{9,10}\)
- Comfortable, with little to no downtime\(^1\)
KLERESCA® SKIN REJUVENATION TREATMENT

• One treatment per week for 4 weeks
• Each treatment takes approximately 30 minutes
• Gel is applied on the affected area and illuminated under Kleresca® light for 9 minutes
• After treatment, gel is removed and skin is cleansed and moisturized

• Make-up can be applied immediately after
• Male patients should shave the night before
• Please, refrain from using any topical creams or ointments during the treatment, unless specified by your treating physician
EFFECT WITHOUT COMPROMISE

- Inducing collagen production
- Reducing pore size
- Eliminating fine lines
- Reducing signs of scars
WHAT YOU MIGHT EXPERIENCE

In the clinical trial, adverse events were transient in nature and did not require any intervention by the investigators

- Transient redness after the treatment
- Hyperpigmentation (bronzing of an area of the skin)
- Slight discoloration of hair in some cases where the gel was applied covering facial hair
BEFORE AND AFTER

Female patient 3 months post Kleresca® Skin Rejuvenation.

Improvement of crow’s feet and decrease in fine rhytides

Baseline

After 12 weeks
BEFORE AND AFTER

Female patient 3 months post Kleresca® Skin Rejuvenation.

Pore size improvement at week 12

Baseline

After 12 weeks
Female patient 3 months post Kleresca® Skin Rejuvenation.

Reduction of marionette lines at week 12 due to increase in collagen production.
